

DANTE LAMORTE

Buenos Aires, Argentina · dantelamorte@outlook.com · [linkedin.com/in/dantelamorte](https://www.linkedin.com/in/dantelamorte)

PROFILE

Python-based data analysis, reporting, and business-oriented analytics. Skilled in data cleaning, transformation, visualization, and dashboard development using Python, SQL, and Power BI. Strong interest in IT business value realization, technology enablement, and translating data insights into actionable recommendations for decision-making.

WORK EXPERIENCE

Data Analyst (Freelance)

Jun 2025 – Jan 2026

- Analyzed marketing performance datasets using Python, Pandas, and NumPy to clean, transform, and explore data for business decision-making.
- Built analytical reports and dashboards in Python, Excel, and Power BI to communicate findings and performance drivers to non-technical stakeholders.

EDUCATION

UADE – Argentine University of Enterprise · Buenos Aires
Bachelor's in International Relations – Minor in Data Science
Graduating Dec. 2028

Mar. 2025 - Present

Coderhouse · Buenos Aires

Jun. 2024 – Nov. 2025

Career in Data Science

- Coursework in Computer & Data Science (Data Analytics, Machine Learning, NLP, and Deep Learning)

CERTIFICATIONS

- Power BI: Data Preparation, Data Modeling, Report Design, DAX, and Visualization – Microsoft · 2025
- Machine Learning with Python – IBM · 2025

PROJECTS

F1 statistical research - Power BI dashboard

2024

- Modeled and transformed datasets to build an interactive Power BI dashboard using DAX, calculated measures, and custom tables.
- Designed interactive reports with drill-downs, filters, and calculated metrics to enable data exploration and comparative performance analysis.

YouTube channel analytics – Jupyter Notebook

2025

- Extracted and structured data from the YouTube API, performed data cleaning, transformation, and feature engineering in Python.
- Trained, evaluated, and optimized ML models using scikit-learn and GridSearch to identify factors influencing engagement, reach, and audience growth.

Global trends study – Jupyter Notebook

2025

- Utilized NLP preprocessing techniques (tokenization, stop-word removal) to filter and extract valuable data.
- Implemented and evaluated neural network models in Python to analyze topic dynamics and trend evolution over time.

SKILLS

Technical Skills: Python; Scikit-learn; SQL; Microsoft Power BI; Pandas; NumPy; DAX; Excel; PowerPoint,

Core Areas: Data Analytics; Deep Learning; NLP; Data Science; Data Visualization; Reporting & BI.

ADDITIONAL INFORMATION

Languages: Spanish (Native), English (Fluent, FCE, Grade A)
